

Vinyl/ABS

Vinyl/ABS offers a textured, leather-like appearance and a refined feel. It maintains dependable performance for forming applications and retains its durability and rigidity to withstand wear and tear. A vinyl foam composite is laminated over ABS to create a piece that mimics hand-wrapped parts and is near impervious to scratches and marring. By adding vinyl, the regrind cannot be reused and the depth of draw is slightly decreased.

Vinyl/ABS is like a high-performance leather. It has a sophisticated look and feel while also providing the lasting durability required for active lifestyles and applications.

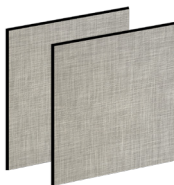

Applications:

- ✓ Van interior
- ✓ Automotive interior
- ✓ ATV components
- ✓ Marine dashboards
- ✓ Recreational vehicle
- ✓ Conversion van interior
